- Effective time management from balancing school and job responsibilities
- Learns new skills quickly due to life-long passion for knowledge
- Collaborates well in a team from group project experience

EDUCATION

British Columbia Institute of Technology
Computer Systems Technology Diploma

Jan 2017 - May 2019 (expected)

- Hands-on programming experience with a variety of languages, technical communication, group software projects
- 94% GPA

ACADEMIC TEAM PROJECTS

Grocery list web app (github.com/turnervink/greenlist)

Apr - May 2017

- Collaborated with 4 other students to plan, code, and test an AngularJS web app using the Agile process
- Maximized code reusability by creating AngularJS services to manage user data using Google Firebase
- Gained experience using AngularJS to design a single-page, mobile-first experience
- Deployed app using Firebase at www.greenl.is

Hiking trails resource website (github.com/turnervink/vanpeaks)

Jan - Apr 2017

- Acted as project manager for a team of 5 students to create an information resource website using HTML/CSS, Bootstrap, JavaScript/jQuery, and PHP
- Used GitHub project management tools (issue tracker, projects, milestones) to delegate tasks to team members and manage the project codebase

PERSONAL PROJECTS

Customizable watchface for Pebble Smartwatch (github.com/turnervink/square) Apr 2015 - Present

- Self-learned the Pebble SDK through online tutorials to build a custom watch face using C
- Collaborated with the Pebble app store team to be featured on the store's front page, resulting in over 50,000 installs
- Communicates with users to assist with bugs and integrate feature requests
- Monetized by collecting user donations through watchface settings page

Discord Chatbot

Jul - Aug 2017

- Coded in Python for 3 weeks to create an interactive chatbot for the messaging service Discord
- Self-learned Python and the Discord.py library to interact with the Discord API
- Integrated the Python image manipulation library Pillow to generate custom profile pages for users
- Researched documentation and formatting practices to ensure code was well-documented and readable

Bus arrivals app for Pebble Smartwatch (github.com/turnervink/translink-nextbus) Apr - Dec 2016

- Built an app for the Pebble smartwatch using C to allow users to receive information on the next arrival at a bus stop
- Integrated with the TransLink API to access real-time data for buses in Metro Vancouver
- Focused on creating a straightforward experience and ensuring that information was easily accessible
- Learned how to handle API error codes and effectively communicate information on a small screen
